

Software Project Planning Guide

Discovery — Understand the business problem, target users, and project goals.

Requirements — Define features, functionality, and project scope clearly.

Budget — Estimate development, hosting, tools, and maintenance costs.

Timeline — Break the project into milestones and set realistic deadlines.

Team — Choose developers, designers, testers, and other required roles.

Testing — Test functionality, security, performance, and user experience.

Launch — Deploy the application and monitor it after release.

Maintenance — Fix bugs, improve features, update dependencies, and maintain security.
